## Configuring Safari

Start by opening Windows Explorer or My Computer and navigating to the CTI client's program folder; it is usually in the 'Program Files' folder on the C: drive. Also open Safari and go to the extensions page (Click on the cog and select 'Safari Extensions'). Sit the two windows side-by-side.

Click and hold the mouse button down on the 'SafariDialExtension.safariextz' file in Windows Explorer/My Computer and drag the file over to the Safari window, then let go of the mouse button to drop the file into Safari; this installs a version of the dialing add-on in Safari. If the 'SafariDialExtension.safariextz' file is not present in the CTI client program folder, you need to update the CTI client.

A window will pop up asking you if you are sure you want to install the software, click 'Install' to proceed with the installation. The installation shouldn't take very long.

Well done! That is the end of the Safari configuration process.

**Note:** ucplus for MAC will install the Safari plugin automatically when first installed. To install manually go to the configuration menu and on the versions option press the "Re-Install Safari Plugin".
