carpenterz: Try not to swear. There is no need for it. I'm just frustrated because I have been trying to fix this for days carpenterz: ok, open a terminal, run 'mplayer movie.avi' and it worked so I have to uninstall the driver? pfifo: what were you doing? I only have one OS on this computer carpenterz: run 'cat /var/log/Xorg.0.log' and pastebin the results carpenterz, sudo dpkg-reconfigure xserver-xorg, choose the vesa driver and it will go, maybe, I haven't tried it in a while I've tried that. Nothing changes. I'm trying to paste it now carpenterz: no, type it in the terminal, not in a pastebin! oh sorry pastebin isn't opening carpenterz: Please don't flood; use to paste; don't use Enter as punctuation. carpenterz: carpenterz: of course the kernel is already linked with the vesa-driver carpenterz: dpkg-reconfigure xserver-xorg "sudo dpkg-reconfigure xserver-xorg sudo: dpkg-reconfigure: command not found " carpenterz: dpkg-reconfigure "sudo dpkg-reconfigure xserver-xorg" that's what I get 82157476af
